This company prospectus is designed to give you an understanding of the iPassport Ltd company and to introduce you to the solutions we offer. If you require more information on these individual services please visit their respective websites which can be found in this booklet.

The history behind the company

The concept was originally conceived early 2017 following a conversation between our founders about the frustrating experience of shopping and entertainment. The focus soon turned in to a deeper discussion regarding physical documentation, questioning whether it was needed in today's digital climate.

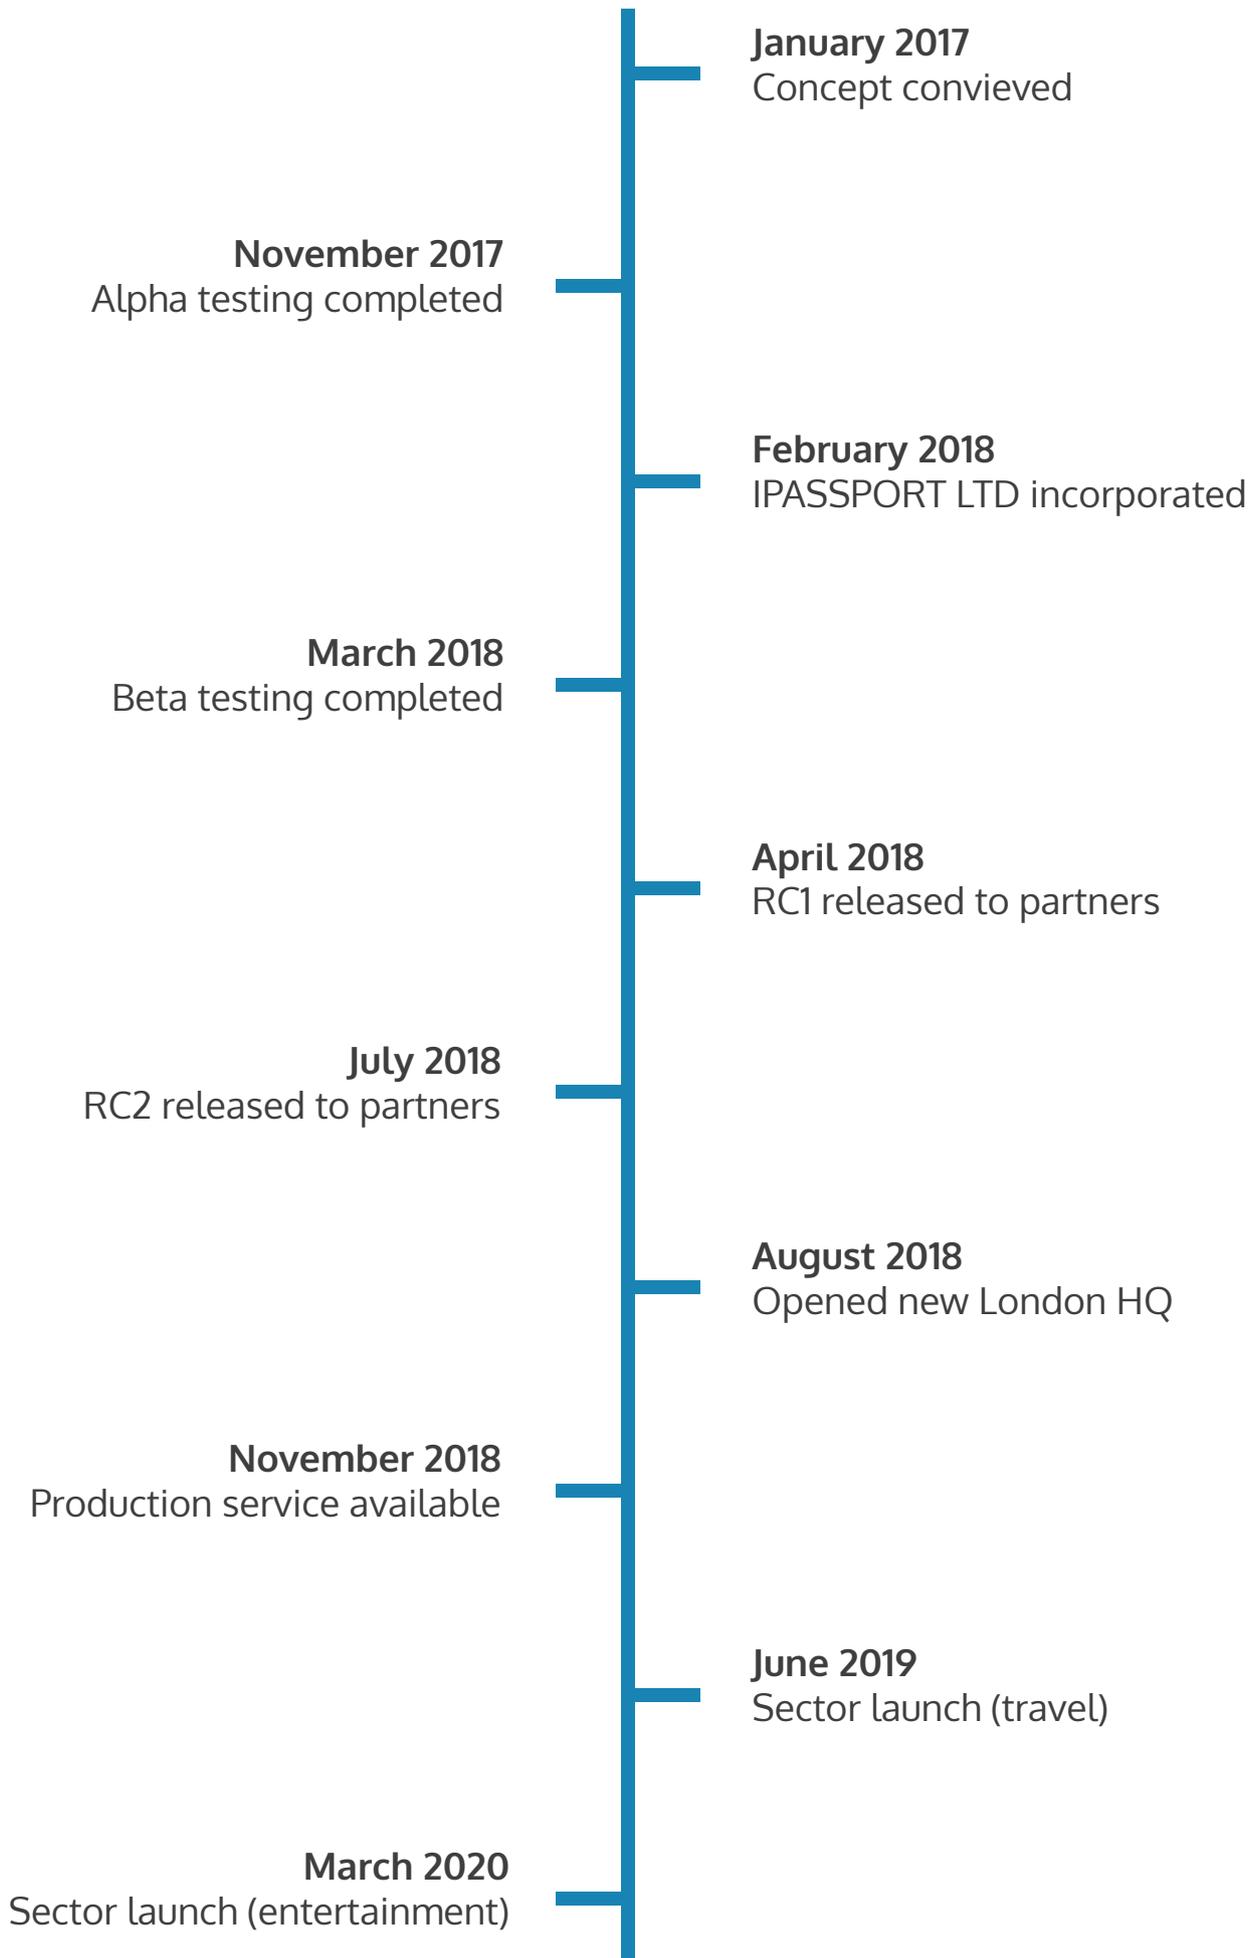

We soon formalised a team to realise the idea and following 2 years of intense research and development, the first version of Stashd was officially released. The service allows individuals to save digital representations of documents issued by an organisation, in our safe and secure cloud storage, yet is easily accessible using a variety of fast and efficient methods including biometrics. Best yet is that you control who has access to your data and can delete what you like at any time.

Whilst we had intended to launch with entertainment venues, the reason for building this service, we soon gained interest from many other sectors for a variety of different uses. We decided to focus on three main sectors; travel, finance and retail.

"I joined because Mark came to me to explain the ideas behind iPassport. I fell in love with the solution and I knew that I could let my creativity run and help to build the brand into one of the biggest players in the information service industry."

- Joshua Noon

Our Team

Meet some of the team

Mark Arbuckle

Mark is the Managing Director at iPassport Ltd. He has lived and worked in London for the past 20 years, he's been with some brilliant companies and has seen the innovation of the iPassport solutions first hand. Mark joined the company because of his passion for complete control over his personal information.

Ollie Last

Ollie is the Head of Research & Development for iPassport. He has plenty of experience within the entertainment sector and has relationships with partners who specialise in venues and entry systems. Ollie has been with the company for over two years and has been a valuable asset to the entire team.

Oliver Buthlay

Oliver is the Senior Account Manager at iPassport and he has been working in this role for over a year. He operates as the first point of contact for our clients and communicates any of their needs and demands directly to the iPassport team. Oliver joined the company because he believed in the product.

Joshua Noon

Joshua is the Head of Sales & Marketing working across all of the iPassport solutions. He has over 5 years of freelance experience and has a practical, hands on approach to the company and is working hard to build the best most creative team around him. Joshua joined iPassport in the hope to bring his creativity to life.

We work with the most creative people.

We use the most secure products in our service.

We build the most innovative solutions.

The ethos behind the company

Paper free Guilt free

At iPassport HQ we've taken an oath to go paper free. All of our work is done electronically and we've eliminated the need for our employees to have paper copies unless entirely necessary. We want to set an example for other businesses because together we can make a difference.

Secured online Protected always

The company uses online workstations such as Office 365, which allows for all of our documents to stay securely protected at all times. Security is of the utmost importance to us and we will only ever use the best. Because if you use the best products you can create the best solutions.

Customer control Always and forever

We strive to put the customer at the forefront of every solution we offer. With our Stashd service, control over data is what we think should be in the hands of our customers. Our goal is to make every use simple, quick and effortless. Meaning our customers can get on, doing what they do best.

Our Key Points

There are many amazing reasons you should choose iPassport. Here are just a few of them that make us who we are and what we do.

**ADAPTABLE
API KIT**

**PEOPLE
FIRST**

**INNOVATIVE
TECHNICAL TEAM**

**CUSTOMER
TRANSPARENCY**

**COMPLETE
CONTROL**

**ICAO CERTIFICATES
VERIFIED**

**BIOMETRIC
ACCESS**

**PAPER
FREE**

**MILITARY GRADE
SECURITY**

Security is our very foundation

Certification and Compliance

We understand the importance of information security so much so that we have built our entire company around it. It's at the heart of every aspect of our operation and everything that we do. This page provides an outline of the measures we have taken and continue to take to ensure the security of the information which we handle.

Technical

Securing information systems can be a complex and challenging task. That's why we've partnered with industry-leading information security expert Microsoft. Using Microsoft's world-class infrastructure, we have established and maintain the highest levels of security across our entire enterprise. Every aspect of our operation utilises Microsoft's highly-secure infrastructure from our communications and administrative systems through to our application services and websites. Building our enterprise on Microsoft's certified technologies enables us to meet the task of maintaining safe and secure solutions.

Operational

Whilst we know the importance of securing the technology which we use, we acknowledge it is only as good as the people that use it. So, we decided to run our organisation a little differently. We maintain a 100% paper-free operation and have banned all removable media, including paper and portable storage devices. All our information resides within secured datacentres which are access protected by two-factor authentication. Every member of our team is CRB checked before joining and receives vigorous training on internal and industry data protection standards, including the GDPR. We pride ourselves on going above and beyond requirements to maintain operational security standards that parallel our technical security standards.

Certification include:

- SOC 1 Type 2 / SOC 2 Type 2 / SOC 3
- ISO 20000 22302 27001 27017 27018 9001
- CSA STAR FISMA

When you can't
see a solution
that solves a
problem, we
make one.

Our solutions

Stashd

Stashd is a digital information service designed to eliminate physical document using biometric technologies. The Individuals and Organisations control what is stored and how long it is stored for. iPassport only operate the service, we do not deliver it. We work with a network of partners that specialise in delivering the service to each industry sector, including aviation. We are also working in the sectors of retail, hospitality, entertainment, travel and sport.

www.stashd.global

Cognosco

Cognosco is an on premise private service using Facial recognition, document storage and a web management tool. It can be custom branded but powered by Cognosco and run locally onsite. The Individual will be able to add a document to the Cognosco service and will have to register each time they use the service. The individual's details will then be deleted after 24hrs. The service is based on CRUD. Create, Read, Update, Delete.

Our services have achieved **world firsts**

Our Stashd solution has achieved multiple world firsts across the aviation sector with more on the horizons in other sectors.

“We are really pleased to be an early adopter of this new technology designed to further enhance the experience for both our passengers and our airline customers at Dublin Airport. We are delighted with the progress of the trial so far and look forward to extending the offering to a wider audience, including those travelling to the U.S. in the coming months.”

Frances O’Brien

Vice President of PMO for DAA for
InternationalAirportReview.com

“Dublin and Bristol Airports are changing the way passengers travel and making the process easier and more efficient. For example, it takes less than one second to capture and process a passenger’s facial image and eliminates the need to repeatedly present travel documents. We see this as another leap forward for our biometric technology to play a key role in making the connected aviation ecosystem a reality.”

Christopher Forrest

Collins Aerospace for
